

Font EnigmaAstrology 2

General

EnigmaAstrology 2 is the successor to an earlier font that I developed in December 2018. It is intended for use in my Enigma program, but you can also use it in other programs, such as your word processor or presentation software.

The font contains a large number of symbols for signs, planets, and other points in the sky, aspects, ascendant, MC, and retrogradation. In some cases, you'll find multiple symbols, and you can of course choose which ones you want to use.

An important difference from the earlier version is that this font also contains regular letters and numbers. You can type your text and use astrological symbols without having to switch fonts. For those in the know: it is now a Unicode font.

Enigma Astrology 2 is based on an existing font: FreeFont. Both FreeFont and the Enigma font are available under the terms of a GPL license. This means that you can use it for free, but any modified version must also be offered under the GPL license. If you use software and want to apply the font in it, the only requirement is that your software must be open source. It doesn't have to be free, but you must make the source code publicly available.

I hope you enjoy using this font!

Jan Kampherbeek, December 20, 2024.

Installation

If you haven't done so already, you can download the font and manual via

<http://radixpro.com/downloads/font/>

In the download you'll find two files: *EnigmaAstrology2_en.pdf* (this manual) and *EnigmaAstrology2.ttf* (the font). You must install the font before you can use it.

In Windows, double-click on the file, and you'll get a screen with an overview of the font. Click the Install button; within a few seconds, this button will turn gray, and the font will be installed.

If you have previously installed the font, you'll get a notification about this; indicate that you want to replace the font.

If you have associated the .ttf file type with another application, this method won't work. In that case, you can drag the EnigmaAstrology2.ttf file to the folder c:\Windows\Fonts.

If you're working with Apple, you need to open *Font Book*. Search for it in *Applications* or use Spotlight via ⌘ + spacebar. Navigate to the downloaded file EnigmaAstrology2.ttf, select this file, and click *Open*. You can then choose to install it for all users or just the current user.

In an Apple environment, you'll need to configure the system to work with this font. To do this, go to *System Settings > Keyboard > Input sources*.

Click the input source menu in the top-right menu bar and select *Unicode Hex Input*.

Usage

In your document, select the font EnigmaAstrology2. If you already have text, select all text and choose this font.

In a Windows document, type the code for a symbol and press alt + x while the cursor is at the end of the symbol.

You will then see the astrological symbol.

An example: the code for the Sun is E200. Type E200 and then alt-x. You will then get ☉.

You can check the codes in the table at the end of this document.

On an Apple computer, you need to switch to the *Unicode Hex Input keyboard*. Press and hold the *Option* key, type the code, and release the Option key.

You don't need to switch fonts when you want to use an astrological symbol. All text in this manual uses the EnigmaAstrology2 font.

If you want to use this font in your software, you can embed it in your program or call it as an external font. You must then use the Unicode syntax, code E200 usually becomes '\uE200'.

Aspect symbols

You'll find several new variants for the aspect symbols. You can now use variants that indicate whether an aspect is applying or separating, and whether the aspect is waxing or waning.

Waxing: the faster planet moves toward the slower planet. You see a '>'.

Waning: the faster planet moves away from the slower planet. A '<'.

Applying: the aspect becomes more exact and thus the orb becomes smaller. A '+'.

Separating: the aspect becomes less exact and thus the orb becomes larger. A '-'.

A waning and applying square looks like this: $\square\bar{>}$

Of course, you can also use the conventional symbols, for example: $\square$

License

EnigmaAstrology2 is a free font, but there are some restrictions on its use. The font is a modification of an existing free font, *FreeFont*. I have only added the astrological symbols. FreeFont is distributed under the GPL license. This means that you can use, distribute, and even modify the font, but you must always use the GPL license. With this license, your product must be open source. Fonts are always open source, but you can also use a font in software. That software will also need to be open source. It's not a problem if the software is commercial as long as it's open source.

Therefore, you cannot use this font in software that is not open source.

♇	E603	Kronos	Uranian
♈	E604	Apollon	Uranian
♉	E605	Admetos	Uranian
♊	E606	Vulkanus	Uranian, not to be confused with Vulcan from the School of Ram or with Vulcan from Carteret.
♋	E607	Poseidon	Uranian
♌	E608	Persephone Ram	School of Ram, not to be confused with Perséphoné from Carteret. Also an alternative symbol for Eris.
♍	E609	Hermes	School of Ram
♎	E610	Demeter	School of Ram
♏	E611	TransPluto	Also called Isis
♐	E612	Persephone Carteret	Carteret/Bode, not to be confused with Perséphoné from the School of Ram.
♑	E613	VulcanCarteret	Carteret/Bode, not to be confused with one of the Vulcans from Leverrier, the School of Ram or Uranian astrology. The symbol is the same as one of the symbols for the Vigintile aspect.
♒	E614	Vulcan Leverrier	
♓	E615	Vulcan Leverrier alternative 1	
♈	E616	Proserpina	

Aspects

In the description, 'app.' stands for applying (the orb becomes smaller), 'sep.' stands for separating (the orb becomes larger), 'wax.' stands for waxing (the faster planet moves toward the slower planet), and 'wane.' stands for waning (the faster planet moves away from the slower planet).
